VISA

production and personalisation system

ANY Security Printing Company PLC has a diverse portfolio of products, among others in the range of documents used to identify citizens. Today's documents are both physical and digital data carriers with a range of security features and anti-counterfeiting protection, their decorative, colourful graphics also display national symbols in a country-specific way. However, behind the attractive exterior, hidden features ensure that the products have the highest levels of security and protection against counterfeiting.

Creating a new document is an extremely complex process, which requires joint reflection with representatives of the relevant areas of public administration.

ANY's comprehensive consultancy and complex production process have been trusted by over 50 countries around the world, which are all using at least one of the Company's products!

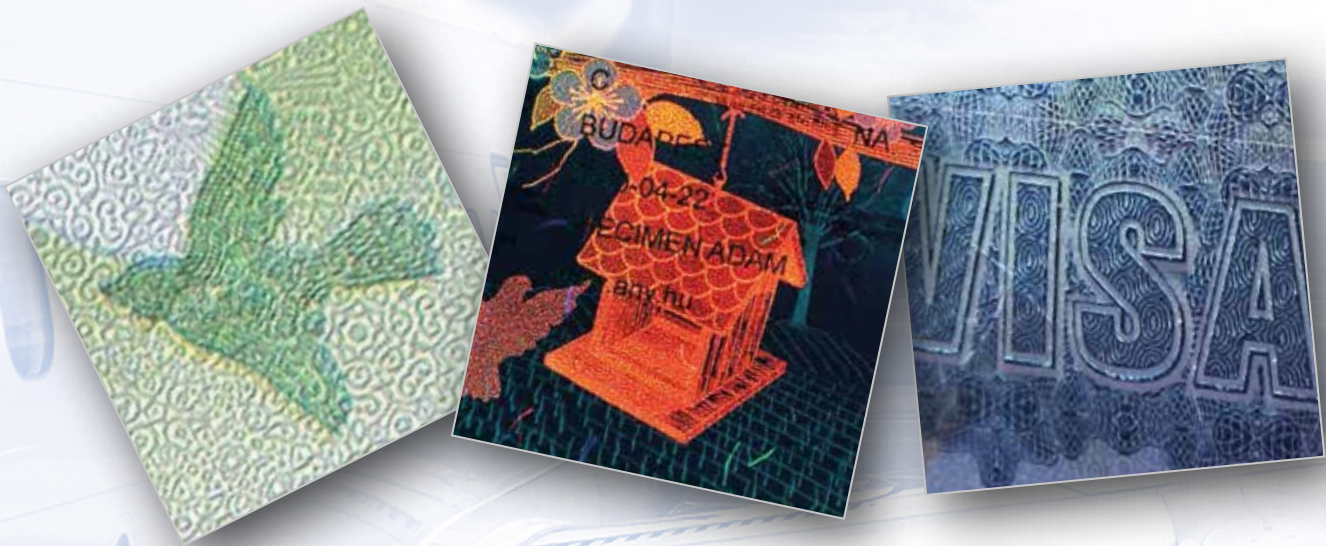

ANY has the technological and professional background to produce and personalise ePassports and visas.

ANY offers fully ICAO 9303 compliant visas, carrying much more security elements than it is obligatory.

About the production

ANY undertakes the whole design and manufacturing process with safe, closed technology and a certified and ratified safety and production-technology system. The documents with unique, exclusive security solutions, developed by our Document Security Laboratory, are produced in an audited environment in accordance with the strictest data security regulations.

The know-how and experience of our experts enable us to provide a complete service from effective production of security documents including design, printing, up to final products' packaging and verification solution. In terms of security elements, the visas offered by the Company by far exceed the requirements of the ICAO 9303 (MRV) standard.

COMPLEX VISA ISSUING SYSTEM

fast, secure and traceable

The complex visa issuing system improves security and fastens the visa issuing process. It allows applicants to start their application via the internet. Authorities can track the entire process from visa application to visa issuance or refusal, the status of visa stickers in the system, as well as the details of the person intending to enter the country, the purpose of entry and the place of stay after entry.

The process of visa issuance using the system:

Main advantages of the system:

- The Information Portal is not only an online application platform, but also provides full information on visas. It also allows online payment.
- Continuous communication between the applicant and the issuing body throughout the process: notification of the applicant about actions and events. Automatic notification when the visa expires.
- Smoother communication between the issuing body and the various public administrations. Visa priority approval option.
- The central register system allows the authorities concerned to keep track of visa applications received, visas issued and how many travellers are currently in the country and when they will have to leave.
- Complete register including visa history and discarded visa stickers, with continuous synchronisation.
- The system is able to issue a visa locally to the applicant in an express procedure and only synchronise with the central register afterwards.
- Border control system: the authenticity and validity of visas can be checked upon entry. The system stores queries from the border, entry, exit and possible visa revocation until the end of the visa validity period and then for the period required by law, so that these data can be retrieved if necessary, even for multiple entry visas.

Paper-based documents such as passports, visas, certificates, etc. may be filled in on-site with our decentralised personalisation system. This security inkjet or laser personalisation system contains security printers and our proprietary security inks, and suitable primarily for paper-based documents. It can be detected under UV light whether subsequent falsification has been made to the personalised data.

We are ready to supply complex systems, solutions and equipment for document offices:

ANY Security Printing Company PLC

About the Company

ANY Security Printing Company PLC was founded in 1851. The Company is one of the leading security printing companies and an identity solutions provider in the Central Eastern European region. Its head office is located in Budapest, Hungary. With more than 1000 employees in 5 countries at 10 premises, its goal is to make people's everyday life more secure and more comfortable. The Company's shares have been listed on the Budapest Stock Exchange in the premium category since 2005.

ANY does not only produce documents, it also provides secure person identification, innovative product identification and data logistics in large volumes.

The Company specialises in providing products and solutions for state administrations. These products and solutions for governments are varying in numerous fields: identity cards (e.g. residence permit, refugee card, driving licence, student card, voter's card), paper-based documents (e.g. breeder document, election forms), documents for person identification (e.g. passport, visa) and other official documents as well as vouchers and excise and tax stamps. ANY offers modular products and complex services in the process of document issuing. Its references, special technology, security preparedness, more than 170 years of experience and 12 domestic and international certificates guarantee that it can offer the best possible products for its Customers.
