

Electronic Identity Card

production and personalisation

eID

production and personalisation

ANY Security Printing Company PLC has a diverse portfolio of products, among others in the range of document cards such as residence permits, refugee cards, driving licences, student cards, voter's cards, etc. A special type of document card is identity card, used to identify citizens. Electronic identity cards in addition to being used for personal and electronic identification, as a travel document or a health insurance and taxpayer identification, can also be used for digital signatures on e-government services. Today's documents are both physical and digital data carriers with a range of security features and anti-counterfeiting protection, their decorative, colourful graphics also display national symbols in a country-specific way. However, behind the attractive exterior, hidden features ensure that the products have the highest levels of security and protection against counterfeiting.

In our Document Security Laboratory, our experts work every day to incorporate the highest level of protection and the easiest-to-verify, proprietary security features into the documents, making life easier for authorities and individuals. Our services include also the delivery of security solutions for the decentralised and centralised issuance of documents.

Creating a new document is an extremely complex process, which requires joint reflection with representatives of the relevant areas of public administration.

ANY's comprehensive consultancy and complex production process have been trusted by over 50 countries around the world, which are all using at least one of the Company's products!

ANY has the technological and professional background to produce and personalise electronic identity cards.

ANY offers fully ICAO compliant ID cards, carrying much more security elements than it is obligatory.

About the production

ANY undertakes the whole design and manufacturing process with safe, closed technology and a certified and ratified safety and production-technology system. The documents with unique, exclusive security solutions, developed by our Document Security Laboratory, are produced in an audited environment in accordance with the strictest data security regulations. The know-how and experience of our experts enable us to provide a complete service from effective production of security documents including design, printing, up to final products' packaging and verification solution.

Hologramming and laminating

application of holograms, tactile embossed elements, CLI/MLI feature

Personalisation and chip embedding

ICAO compliant chip module, laser engraving, thermal direct transfer, thermal retransfer technology

OUR LATEST DEVELOPMENT FOR POLYCARBONATE CARDS

LENA

The transparent window can be considered a security feature as it is, but it opens space for placing other security features.

The print is invisible in both normal and UV light. However, its presence can be easily verified by holding the window over a simple piece of copy paper and illuminating it with a basic flashlight. The printed pattern becomes clearly visible as a shadow. This provides the simplicity of checking like a usual second-level device, while being more deeply concealed than a typical fluorescent print.

Security fibres in polycarbonate

The position of the security fibres is determined within the layers of the card. The fibres are fixed to the foil while its laminating. The specific area of the surface containing the fibres is around 3 cm², the quantity of the fibres is from 3 to 15 pieces per card with random distribution.

ANY Security Printing Company PLC

About the Company

ANY Security Printing Company PLC was founded in 1851. The Company is one of the leading security printing companies and an identity solutions provider in the Central Eastern European region. Its head office is located in Budapest, Hungary. With more than 1000 employees in 5 countries at 10 premises, its goal is to make people's everyday life more secure and more comfortable. The Company's shares have been listed on the Budapest Stock Exchange in the premium category since 2005.

ANY does not only produce documents, it also provides secure person identification, innovative product identification and data logistics in large volumes.

The Company specialises in providing products and solutions for state administrations. These products and solutions for governments are varying in numerous fields: identity cards (e.g. residence permit, refugee card, driving licence, student card, voter's card), paper-based documents (e.g. breeder document, election forms), documents for person identification (e.g. passport, visa) and other official documents as well as vouchers and excise and tax stamps. ANY offers modular products and complex services in the process of document issuing. Its references, special technology, security preparedness, more than 170 years of experience and 12 domestic and international certificates guarantee that it can offer the best possible products for its Customers.
